

Taxonomic Identification
J-13-10

The recipient is reported to be *Saccharomyces cerevisiae* [REDACTED]. Identification confirmation using [REDACTED] rDNA sequencing was performed by the company. A comparison was made with authentic *S. cerevisiae* [REDACTED] (GenBank Accession# [REDACTED]), reported by Straininfo as identical to [REDACTED], and described as a strain used for the whole genome sequencing project for *S. cerevisiae*. In addition, strains of related species [REDACTED] (GenBank Accession# [REDACTED]) and [REDACTED] (GenBank Accession# [REDACTED]) were also compared (MCAN Suppl. 1). The results showed no differences between the recipient strain, the MCAN strain and [REDACTED] but at least [REDACTED] difference (usually several more) between the subject strains and the related species. The identification of the subject microorganisms as the yeast *S. cerevisiae* is accepted.
